SCRUM-12 / SCRUM-1

1

Project Skeleton + Repo Setup

Done

Done

Improve Story

Description

- [x] Initialize backend/frontend project structure
- [x] React, NodeJS + Express, MangoDB(Docker version).
- [x] README，Other Docs

User Auth (Register/Login)

Done

Done

Improve Story

Description

- [x] Complete API
  - [x] 1. Register
  - [x] 2. Login
- [x] Data storage
  - [x] “User Table” Database fields Design (please consider “profile information” field - string arrray)
  - [x] Connect to MangoDB

Acceptance criteria：

1. **Complete and available login interface UI forms,**
2. **Available registration, login logics**
3. **Obtaining user information**

SCRUM-12 / SCRUM-2

2

Basic Match API

Done

Done

Improve Story

Description

- [x] Implemented a baseline matchmaking algorithm using skill, behavior, and preference compatibility.
- [x] Built a backend service to load candidate profiles, filter them, score them, rank them, and return the top results.
- [x] Exposed `GET /matchmaking/:userId` as the main API for retrieving recommendations.
- [x] Added query parameters for result limit, scoring weights, and profile-based filters.
- [x] Returned not only total score but also score breakdown so the ranking remains explainable.

Testing Baseline (Test-first evidence)

Done

Done

Improve Story

Description

- [x] Set up Jest-based backend test baseline and standard test entry.
- [x] Added unit tests for core matchmaking scoring rules first to lock expected algorithm behavior.
- [x] Added service/API smoke tests for register, login, profile update, matchmaking ranking, filters, and invalid input handling.
- [x] Added BDD scenario for the main user flow. player requests matchmaking and receives ranked recommendations.
- [x] Used in-memory MongoDB to keep tests isolated and repeatable.

Player Profile (Skill + Behavior fields)

Done

Done

Improve Story

Description

- [x] Designed the player profile schema with `skillScore`, `behaviorMetrics`, and `preferences`.
- [x] Implemented backend profile storage and retrieval using MongoDB/Mongoose.
- [x] Added validation to ensure the target user exists and profile data is in the expected format.
- [x] Exposed `PUT /profile/:userId` and `GET /profile/:userId` endpoints for profile create/update/read.
- [x] Added a minimal frontend profile form so users can enter skill and behavior data for later matchmaking.
